on 03450 21 21 51

Professional expertise...

SRM's experts, drawn widely from both the public and private sectors, offer you an exceptional skill-set and depth, all delivered with a first class level of service.

Our specialisms embrace the entire risk and compliance agenda; for example our Information Assurance practice covers HM Government IA, N3, Payment Card Industry Data Security Standards (PCI DSS), ISO 27001 and integrates within our forensics, incident response, training and other practices.

This broad range portfolio, coupled with our focus on building effective and friendly relationships across organisations means we can address your business need rather than just narrow technical requirements. Additionally, our flexible engagement model means we adapt to changes in your organisation and requirements for large and small projects.

- 
-  Cyber Forensics
 -  Information Assurance
 -  Incident Response
 -  Training, Simulation and Education
 -  Risk Management
 -  Advanced Persistent Threat Defence

SRM's existing clients range from enterprises and government departments to small and medium size businesses, charities and other non-commercial institutions.

They trust SRM because we deliver what we promise.

A composite approach...

Our broad skill set enables us to improve project flow and the integration across programmes because we can act as one service provider, offering better value for money and minimising disruption to your operations.

Consulting

We provide consultancy services in Compliance and Remediation, Information Security, Audit, and Forensic Investigation Services. We work in partnership with you to make your organisation secure, compliance and resilient.

Capabilities

SRM has a team of highly experienced and qualified security and technical specialists. Every day we deploy the following capabilities as part of our client engagements – Scoping/Planning, Risk Management, Framework and Plan/Policy Development/Remediation, Policy Workshops, Technical Support, Project Management, Mentoring, Training/Coaching/Exercising and simulations, Outsourcing (Task/Roles), Audit and Review, Network Forensics, Disk Forensics, eDiscovery system design and data mapping, VA/Penetration testing and ethical hacking.

Solutions

SRM has a portfolio of customisable solutions to address common compliance and information management requirements. These have been evolved over a decade to provide a quick and cost effective route to a best practice outcome.

Thomas Cook Group

Anne Young, Group IT Manager

We've worked with SRM for a number of years now on various work-programmes including PCI DSS, Penetration Testing, Security Audits, IS Policies & Standards and Forensic Services. We find them to be friendly, professional, highly knowledgeable and competitive on pricing. Their knowledge results in them being able to advise us regarding what's needed to meet compliance requirements without going over the top and spending more money than we need to.

Reward

Tracy Goncalves, Head of Compliance & HR

I can't remember when I last sent a commendation to a company, but I and our IT staff have just been so impressed that I feel that it's due. From start to finish for the last three years of our level one certification, your service has been more than excellent.

JD Sports

Dave Derby, Group Head of Innovation

I've been working with SRM now for four years on our PCI Compliance Programme. During that time I've found them to be very knowledgeable, extremely co-operative, professional to the end but above all exceptionally pragmatic in terms of getting the job done. They understand the challenges their retail clients face and are always there to genuinely help rather than to hinder.

Accreditations & Partners

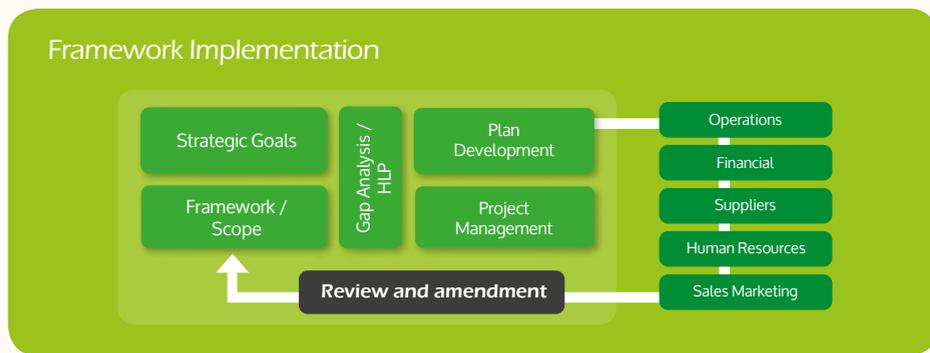

Project Engagement

The cornerstone of SRM's reputation for effective project delivery starts with getting the basics right. This means a well understood set of objectives, a clear and rigorously thought out scope and thoroughly planned work packages. Getting the desired outcomes and realising their benefits then become a matter of course rather than wishful thinking.

Scoping

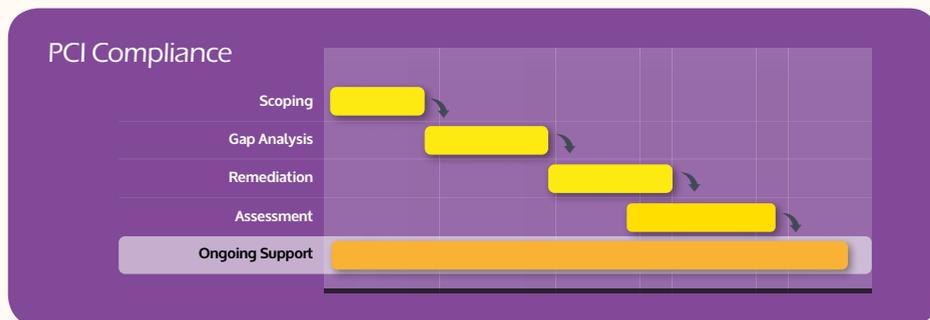

We start with the full extent and work backwards, identifying how elements can be justifiably removed from a project scope, this reduces the chances of scope creep later in a project and presents options for innovation and ultimately improving the value of change and compliance.

Identifying the challenges, the costs, the gap...

Meeting organisational objectives is one thing, doing it in the optimum sequence and with least disruption requires a well thought out roadmap with realistic time scales and flexibility to handle changes to the plan. Our consultants are comfortable with PRINCE, MSP, SDLC, Agile and many more project methodologies and are expert at translating a clear Gap Analysis into a High Level Plan (HLP) and an HLP

into a detail implementation Programme. First and foremost SRM is a technology security company and therefore we understand not just the text but also the intent of compliance codes and security controls, coupled with a detailed understanding your infrastructure, this results in a high chance of success for your projects.

Operational Depth

Over the last 12 years SRM has incrementally built a comprehensive capability matrix that has been deployed in a combination tailored to address the precise needs of each client. By continually reviewing, strengthening and improving capabilities and solutions SRM stays at the forefront of the cyber security world.

Information Assurance	Cyber Forensics	Incident Response	Risk Management	Training & Simulation	APT Defence
ISO 27001 PCI DSS Advisory Services	eDiscovery / eDisclosure	Forensic Readiness Assessment	Project Management	Security Awareness Training	Network Penetration Testing
PCI DSS QSA	Forensic Capture & Analysis (Crown Court)	Business Continuity Planning	Project Scoping	Accredited Classroom Training	Physical Penetration Testing
ISO 27001 Lead Auditor	Investigation & Prosecution Work	Service Continuity Planning	RMADs Review	Simulations & Exercises	Network Forensics
Framework Tailoring	PCI Forensics Investigations	Immediate Response Service	RMADs Authoring	Bespoke Courses to Internal Framework	Log Aggregation & Management
NHS N3		Response Mentoring & Stabilisation	Intelligence Preparation Cyber		Technical Advisory
HMG CLAS			Code Review		
			Code Review Process Implementation		

Programme support

Much of SRM's work centres on mentoring our clients' staff to develop and maintain security practices from within to build mature processes rather than imposing them. This approach ensures change is embedded and truly alters

culture rather than being just one more system to maintain. Wherever possible we tweak existing processes and systems to achieve the desired security outcome and our ability to work across an organisation is crucial to this.

Meeting your objectives

An effective framework pulls all your security and compliance efforts into a single context and enables the benefits and goals to be maintained over time.

We have deep experience in tailoring, tweaking and developing Management Frameworks to meet your organisation's Governance Risk and Compliance (GRC) objectives. A Framework fit for purpose from the start will give you greatest chance of success in maintaining overall security and compliance with multiple regulatory, best practices and the plethora of information security standards that touch the modern enterprise.

Business Continuity

Our BCM consultants are either Members or Fellows of the Business Continuity Institute and benefit from a wealth of experience in helping organisations large and small, local and international. Building an effective BCP is not just about recovering operations but also ensuring communications, understanding the reputational impact and wider risks in a way that they can be proactively managed.

Risk Management

Reduce risks, reduce costs. Given that any organisation's risk picture is constantly changing it is essential to build risk management into your framework objectives and understand where information will come from and how to interpret it.

Intelligence Preparation Cyberspace (IPC)

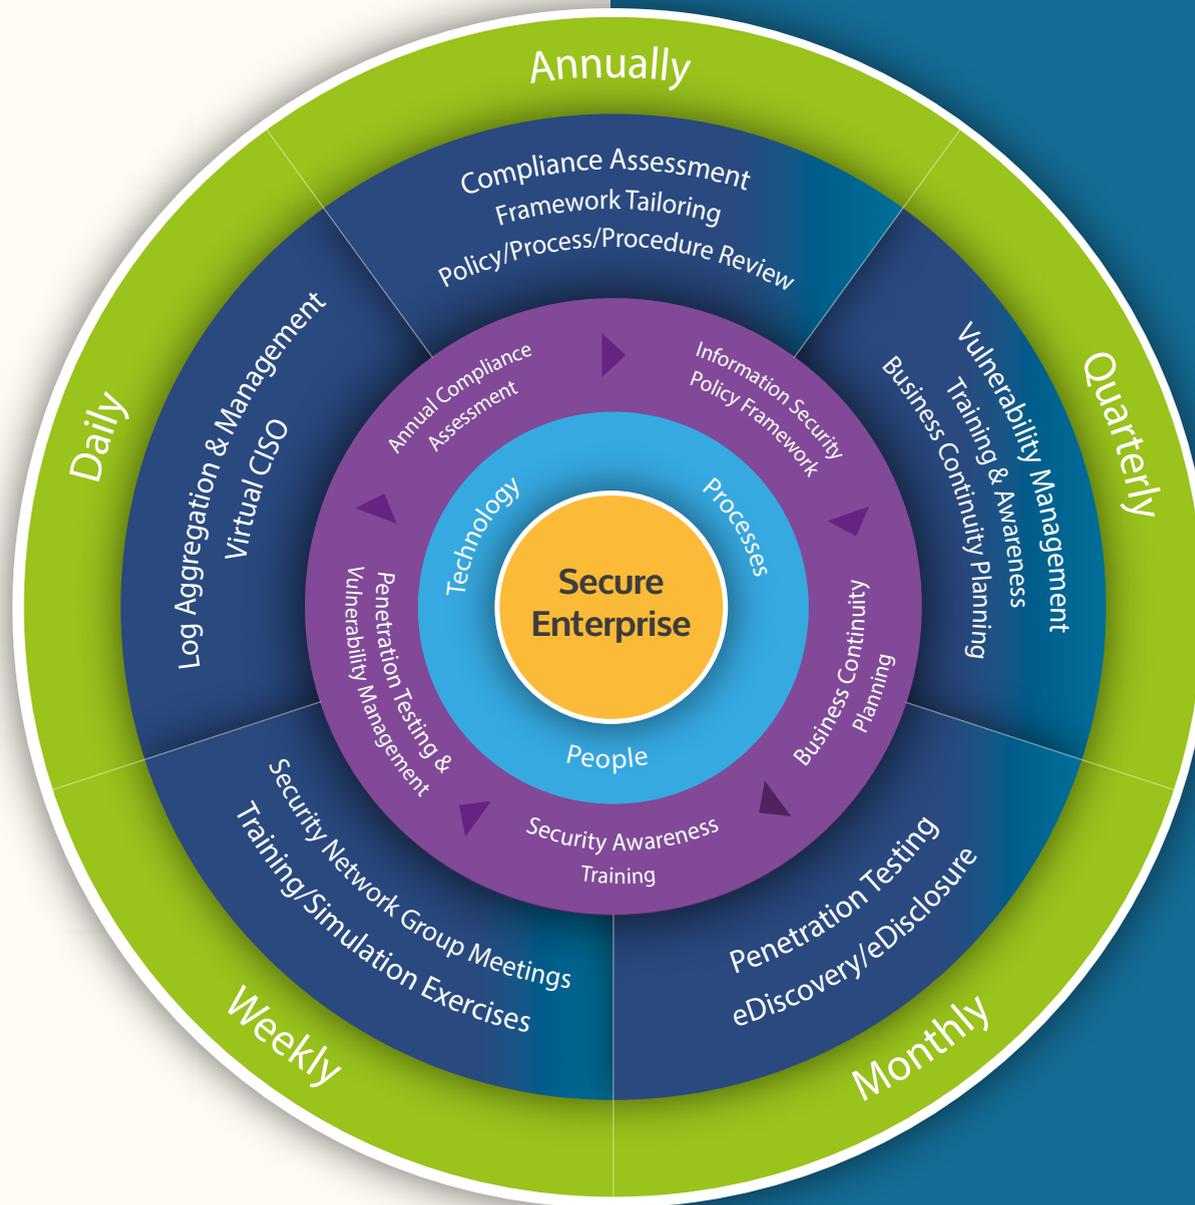

The IPC Solution is a combination of tools, techniques and consultancy that presents our clients with a complete risk picture, enabling them to take control of their environment. IPC involves the mapping of a given scope and presenting risk management information in terms that make sense to the decision maker involved. Our consultants will help you define a range of planning layers, representing different factors in the complex decision process. The process is a powerful decision making tool which can be deployed discretely or as part of a wider management system.

Integrated Solutions

Typically we tailor and integrate existing systems and tools to work with trusted methods, occasionally we provide new solutions from the ground and we can work with your chosen vendors or our own partners to deliver a comprehensive solution.

Smart Security. Smart Compliance.

Integrating your security and compliance requirements into a unified framework to re-use monitoring systems, controls, infrastructure, testing procedures and training saves money whilst also improving security.

Virtual CISO

Chief Information Security Officer (CISO) is a specialist role requiring a complex mix of experience, skill and inbuilt qualities ranging from the ability to communicate with senior management to articulating intensely technical issues into clear language with clear recommendations and balanced advice.

Our Virtual CISO Service (V-CISO) fulfils the CISO role and is delivered under the aegis of a Principal Consultant with years of experience of security incident management, legacy and cutting edge technologies and compliance programmes. The detailed and comprehensive on-boarding process tailors the service to your specific requirements.

eDiscovery & eDisclosure

To ensure your eDiscovery capabilities are supported effectively our experts can maintain your data maps and run disclosure exercises to prove the efficacy and integrity of your solution. Additionally, we can support you through complex eDisclosure requests.

International Support

Our consultants work across Europe, the Near East and Middle East providing expertise to clients in the financial services, corporate, industrial and transport sectors.

Incident Response

Our Smart Response Service is a proactive and reactive service provided to prepare organisations of all sizes with Forensic Readiness, Incident Response Readiness, Forensic Preview and reactive Incident Response and post incident expertise.

Available to cover different scenarios and service levels and with options to include PCI breaches, evidence preparation, malware analysis and other customisable elements.
